

● MULTI-DEPARTMENT PRACTICE · OFFICE OPERATIONS

● LIVE SINCE MAY 2026

The exceptions all used to be hand edits. Now each one takes a single step.

TO CANCEL AN APPROVED REQUEST

~~5 hand edits~~

1 click

It clears the day, fixes the balance, removes the calendar event and can tell the employee.

7 steps to 1 dialog

for a sick day entered after the fact

4 parts to 1 step

to set up a new hire

125 automated tests

passed before it touched a real record

BEFORE

- 1 Delete the request row
- 2 Erase the grid cell
- 3 Erase the log line
- 4 Refresh the totals
- 5 Delete the calendar event

AFTER

PTO Admin

Add Manual Entry

Refresh All Totals

Add Employee

Archive Employee

Cancel PTO Request

✓ All five, in one click

BEFORE

- Entering a sick day after the fact took seven hand steps, and one missed step left a balance wrong
- A new hire meant a new sheet, a copied template, a roster edit and a form edit
- Undoing an approved request meant five separate edits
- Every employee record had grown its own layout over the years

AFTER

- A menu inside the sheet the office already works in
- Missed days go in through one dialog and update the same records an approval does
- New hires added and departures archived in one step each
- Every record moved onto one layout and checked cell by cell

Built carefully. One approach, a formula that would have let totals drift without warning, was caught in review and never shipped. Issues get logged and tracked right in the same sheet.
