COST TO READ EACH BILL

~1¢ a bill

Measured in testing at 0.9 cents, billed to the practice's own cloud account.

5 of 5 real bills

read correctly in testing, plus 12 of 12 test bills

Nothing moves

until the bookkeeper reviews the table and clicks Go

BEFORE

- Every bill arrived as a PDF or a scan and was typed into the books by hand
- Then filed by hand into one of 184 vendor folders
- File names followed two different date rules
- Patient-named bills mixed in with the rest

AFTER

- Drop bills in a folder and open one program
- A table proposes the vendor, date, amount, file name and folder. Untick anything, then click Go
- Renamed, filed and logged, with one-click undo
- Anything showing a patient name or prescription stays out of the books

How it stays private. Only the reading step leaves the computer. It runs in the practice's own cloud account under business associate agreements, and nothing is kept. 17 edge cases pass. The screenshot shows test invoices, trimmed to a few rows.
